Hi Olly -

Thanks very much for testing this out; I've managed to resolve the issue: turns out I was blaming the wrong part of the decision table for the error; the fault actually lay in the "initially" bit of the result variable!

It's validating fine now.

Best Regards,
Ewen

Hello Ewen,

I just tried replicating your example, with a Result class with an attribute 'result' of type string, and a dual axis decision table that sets that value through an action, but the rules seem to validate fine (see below).

Does the problem persist if you try a different tack, such as having the decision table return a "Result"?

Regards,

Olly

Hi Olly -

I was just thinking about you! (I really was)

We've agreed the way forward to implementing our rules, which is to use Decision Tables where ever possible, and we're aiming to get everything live by the end of February. This was all agreed in a follow-up workshop for which I have a presentation; I'd be happy to take you through it if you like (and have

30 - 45 mins spare sometime).

I'm working on the first of those Decision Tables now, which is a dual axis one, with a view to that being the "pattern" for the developer who will create the rest of the templates to follow. To that end I have a technical query that you'll likely be able to answer in a second....

Each Decision Table will take a "submission" data structure and a "coverages" pattern as parameters. A local variable is used to hold the result of the Decision Table rules, and the idea is that this will be added to a collection on the "submission" data structure.

The Action Cell group of the Decision Table uses a Dual List Provider to enable the rule author to select either "Approved", "Rejected" or "Unknown" from a drop-down list. The corresponding content values as "A", "R" and "U".

I created a custom code template to link the Dual List Provider to the Action Cell via the Cell Format.

In summary what I've implemented is similar to the "Payee" Action Cell in the Single-Axis Decision Table example from the Blaze Examples Repository.

When I build my project is that I get the error:

Error: The assignment target is invalid. You can assign values only to variables, properties and indexed properties.

A sample rule from the Decision Table instance is:

```
if ((submission.financialHealth = "NRA") and
(anyCoverage.limit <= 5000000 GBP) and
((submission.branch.country.code ="IT") or (submission.branch.country.code
="ES"))))
then {
set result.result to "R"
}
```

Where result is the local variable which has an attribute also called result.

Any ideas?

Many thanks and regards!

Ewen

Hello Ewen,

It's been a while since we last spoke. How is the work on the auto-renewals project going?

Regards,

Olly

Hi Olly -

We're using a global Blaze Advisor license, which is maintained by our colleagues in Chubb in the U.S. I'm not sure they'd permit us to get our own DS license; and it's also not something we've budgeted for in this project. That situation could change, but for now I'd say hold off on this.

Many thanks,
Ewen

Hello Ewen,

I forgot to mention, on the topic of Decision Simulator, I can ask one of our commercial people to put together a project price for the use of this module. You mentioned a few other projects that were planning to use Blaze – is these would also benefit from DS we could perhaps provide a licensing model that benefits from economies of scale.

Would you like me to look into this?

Olly

Subject: Blaze Advisor slides, Decision Requirements Analysis

Hello Ewen,

Thanks for your time today, it was good to meet you.

Here is a slide deck that you can re-use for your presentation on Friday, and also a deck on Decision Requirements Analysis (DRA) from our recent Decision Management Tools event held in London. The latter is fairly complete but you will find a completed Decision Requirements Diagram (DRD) on page 28. The DRD describes the output from the DRA method and can be used in conjunction with your business stakeholders to map out the decision to be mapped by Blaze.

Please do let me know if you need any assistance, either for ad-hoc queries or for any training requirements you feel are needed by you or your team.

Regards,

Olly
